

VENTCOM SOFTWARE

SKIOLD MAKES THE DIFFERENCE!

The Software program "VentCom" is a program for PC, which gives the possibility to handle and survey functions in the Apollo Multi controller via P-net. Alle data as SET-values, settings for sprinkler, Curve control a.o. can be controlled and changed.

Values for actual Pentemperature, ventilation level, added heat and waterconsumption can be logged. The values is shown grafically in the program, just like all alarms from the controller are displayed on the PC monitor.

VentCom is designed to handle 30 stablesections (15 pcs. Apollo Multi controllers)
